

For all the files, changes were made in the original API according to the given conditions which were learnt in the lecture and slides. The total time spent was around 6 hours for the entire assignment.

- For TimestampConcurrencyController.java:
 - For this, I made changes in the read and write functions according to their respective conditions mentioned.

- For TimestampConcurrencyControllerTWR.java:
 - For this also, I made changes in the read and write functions according to their respective conditions mentioned.

- For Strict2PLConcurrencyController.java:
 - For this file, I implemented the Strict 2 phase locking protocol. This was the most trickiest part of the assignment according to me.
